

EXHIBIT A

[BLIGHT REPORT OF PROPERTY LOCATED AT 11101 W. LINCOLN AVENUE]

Statutory Definitions of "Blight"

Section 66.1333 (2m)(bm) of the Wisconsin Statutes provides a definition of "blight" and cites certain examples of conditions of blight. Both the broad statutory definition and the blight finding which have been made by municipalities throughout the State are much broader than the classic dictionary definition of blight. Essentially the Statute provides three (3) separate routes to identify blight:

1. Property which by reason of dilapidation, deterioration, age or obsolescence, inadequate provisions of ventilation, light, air or sanitation, high density of population and overcrowding, or the existence of conditions which endanger life or property by fire and other causes, or any combination of such factors, is conducive to ill health, transmission of disease, infant mortality, juvenile delinquency or crime, and is detrimental to the public health, safety, morals or welfare; or

2. Property which by reason of faulty lot layout in relation to size, adequacy, accessibility of usefulness, unsanitary or unsafe conditions, deterioration of site or other improvements, diversity of ownership, tax or special assessment delinquency exceeding the fair market value of the land, defective or unusual conditions of title, or the existence of conditions which endanger life or property by fire and other causes, or any combination of such factors, substantially impairs or arrests the sound growth of a city, retards the provisions of housing accommodations or constitutes an economic or social liability and is a menace to the public health, safety, morals or welfare in its present condition and use; or

3. Property which is predominantly open and which because of obsolete platting, diversity of ownership, deterioration of structures or of site improvements or otherwise, substantially impairs or arrests the sound growth of the community.

Narrative Description of Blight Conditions at the Property

The following conditions of blight located at 11101 West Lincoln Avenue in the City of West Allis, Wisconsin owned by Rogers Memorial Hospital Incorporated, a Wisconsin nonstock corporation (the "Hospital") have been or will be corrected with completion of the Project:

1. The original facility was constructed on an old farm site and the existence of foundry sand indicates that prior to 1985 there was likely illegal dumping of materials leading to this condition. Additions and improvements to the site required disturbance of the underlying soil. Such foundry sand and landfill material must be managed as solid waste. Based upon information in the Phase I Environmental Report, the site contains foundry sand and 8 of 10 borings disclosed landfill material. (See applicable data from Phase I attached). Remediation and removal of foundry sand and landfill material was necessary to allow further improvement of the site and remediation of this environmental problem. The size and scope of the project includes the remediation of this condition of blight. (See additional evidence of disposal of this material attached).

2. The existing facility has several areas where there is roof leakage and resulting interior damage. To maintain the appearance, value, health, and safety of the facility, these conditions will be corrected. The size and scope of the project includes the remediation of this condition of blight.

3. The existing entrance to the Hospital is not designed to provide optimal security for patients entering and exiting the building and does not allow for adequate control by the staff of patient ingress and egress. The project includes remodeling and reconfiguring the entry and upon completion will provide optimal security for the health and safety of patients, staff and the community.

4. Prior to the project improvements, the wooded area around the Hospital contained scrub, dead and dying trees, invasive vegetation and created an unsafe condition allowing potential for loitering and lurking to go undetected. The overgrowth also created obstruction to visibility on public sidewalks and was an impediment to potential development and access to a park under consideration for development on a neighboring property. The project includes landscaping to remove scrub, dead and dying trees, invasive vegetation and improvement of each of these conditions of blight.

May 28, 1997

4.0 HISTORICAL SITE INFORMATION

LAW performed interviews and reviewed the following available information in order to ascertain the historical uses of the site and immediately adjacent properties to evaluate the presence of activity of potential environmental concern.

Aerial Photographs	•	Aerial photographs, dated 1954, 1970, 1985, and 1990, viewed at City of West Allis Engineering Department, Wisconsin
City Directories:	•	Wright City Directories, viewed at the City of West Allis Public Library, dated 1932, 1945, 1960, 1970, 1980, 1989, 1991, and 1995
Interviews	•	Interview with Mr. Bob Kwach, CEO of the West Allis Charter Behavioral Health System, Inc.
	•	Interview with Mr. Pat Crawford, Maintenance Staff for the facility
Other	•	United States Geological Survey (USGS) 7.5 minute series quadrangle topographic maps; Wauwatosa, Wisconsin (dated 1958, revised 1994), and Hales Corners, Wisconsin (dated 1959, revised 1994)

4.1 AERIAL PHOTOGRAPHS

Aerial photographs of the site and surrounding areas were reviewed for indications of industrial use at the subject property or adjacent properties, and for indications of the presence of landfills, excavations or other areas of potential environmental concern. Aerial photographs were obtained and reviewed for the years 1954, 1970, 1985, and 1990 from the source listed above. A photocopy of the 1990 aerial photograph is provided in the Appendix I.

The subject property appears as agricultural land in the 1954, 1970, and 1985 aerial photographs. The 1990 aerial photo shows the subject property developed with the subject property's building. The area surrounding the subject property also appeared as agricultural land in the 1954 aerial photograph. Multiple buildings were observed in the area east of the subject on the 1970, 1985, and 1990 aerial photographs reviewed by LAW. An area of disturbed land was observed west of the subject property on the 1990 aerial photograph.

- The subject site appears on the UST list. The UST at the subject property is further described in the table below and in the applicable sections of the site reconnaissance section of this report.
- Seven other facilities located within a one-quarter (0.25) mile radius of the subject property appear on the UST list. These facilities are summarized in the table below.

Table 3. UST Facilities Located Within a One-Quarter Mile Radius of the Subject Property

Facility Name and Location	Distance and Direction	Estimated Hydraulic Position	Number of Tanks
Charter Behavioral Health 11101 West Lincoln Avenue	On-site	NA	One 1,000-gallon steel diesel UST. Installed in 1988, active.
Cardinal Transport Inc. 11016 West Lincoln Avenue	~0.20 mile NE	Upgradient	One 10,000-gallon diesel UST. Installed in 1967, removed 6/91.
Motor Vehicle Repair Center 2406 South 111th Street	~0.20 mile South	Crossgradient	One 10,000-gallon double-wall, Fiberglass gasoline UST. Installed in 1988, active.
Mr. Bud Jost 11327 West Lincoln Avenue	~0.25 mile West	Crossgradient	One 1,000-gallon gasoline steel UST. Installed in 1961, removed 1991.
One Hour Martinizing 2262 South 108th Street	~0.25 mile East	Crossgradient	Thirteen USTs (Three 500-gallon UST's, removed in 1981; Two 550-gallon steel waste oil UST's, removed in 1992 and 1993; Two 2,000-gallon steel gasoline UST's, removed in 1993; Two 3,000-gallon steel gasoline UST's; Two 4,000-gallon steel gasoline UST's, removed 1992; Two 6,000-gallon steel gasoline UST's, removed 1992).
Clark Service Station #1286 2203 South 108th Street	~0.25 mile NE	Upgradient	Six USTs (Two 12,000-gallon double wall fiberglass gasoline USTs, active. Two 4,000-gallon steel gasoline USTs, removed 1993; Two 3,000-gallon steel gasoline USTs, removed 1993).
Badger Freight Service, Inc. 11139 West Becher Street	~0.30 mile North	Crossgradient	One 1,000-gallon steel waste oil UST. Installed 1982, active.

Note: All distances are estimated from the subject property. Hydraulic position is based on surface topography.

Two UST sites that are upgradient and within one-quarter mile of the subject property are Cardinal Transport Inc., and Clark Service Station. However, because the two sites are more than 1000 feet up/crossgradient, the potential for environmental impact to the subject property is low. The remainder of the registered UST sites are not considered an environmental concern due to the distances and/or their apparent hydraulic relationships with the subject property.

Based on that information, it appears that elevated levels of radon at the subject property could be a concern. Therefore, a limited radon survey consisting of 4 samples within the facility was performed. The four samples were found to range from 0.14 to 0.24 pCi/L. This concentration of radon does not appear to be a significant environmental concern for the subject property, since it is below the EPA action level of 4.0 pCi/L.

8.0 FORMER ENVIRONMENTAL REPORT REVIEW

LAW reviewed a previous Phase I Environmental Site Assessment which had been performed for the subject property. The assessment included a subsurface investigation by Warzyn Engineering, Inc., and excerpts from other reports for the adjacent landfill. The report and the excerpts from other reports are listed below:

- *Phase I Environmental Audit for Charter Hospital of Milwaukee, 11101 West Lincoln Avenue, West Allis, Wisconsin*, prepared by Jordan, Jones & Goulding for the Charter Medical Corporation, dated May 31, 1992
- *Subsurface Investigation, Charter Hospital, West Allis, Wisconsin*, prepared by Warzyn Engineering Inc., for Charter Medical Corporation, Macon, Georgia, dated April, 1988.
- Excerpts from *Environmental Assessment of Property at 11241 West Lincoln Avenue, West Allis, Wisconsin*, prepared by Graef, Anhalt, Schloemer & Associates, Inc., for the City of West Allis, dated January, 1991
- Excerpts from *Phase III Environmental Assessment of Property at 11241 West Lincoln Avenue, West Allis, Wisconsin*, prepared by Graef, Anhalt, Schloemer & Associates, Inc., for the City of West Allis, dated July, 1991

The Phase I Environmental Audit by Jordan, Jones & Goulding (JJG) stated that the 1,000 gallon underground storage tank associated with the emergency generator, was not registered with the State of Wisconsin. Separate correspondence was provided to document that the tank was later registered with the State of Wisconsin. The JJG report included concerns regarding Charter's unregistered UST, the fill materials present in the subsurface on the subject property, the adjacent City of West Allis landfill, "numerous" off-site LUST and spill sites north and west of the subject property and a CERCLIS site (more than 1/2 mile east). JJG's recommendation included registering the UST, perform an on-site soils investigation, install borings and monitoring wells to

the north and west of the subject property, and to monitor the WDNR records for additional information on the CERCLIS site.

The Warzyn subsurface assessment report described the installation of ten soil borings performed or provide recommendations for foundation design prior to construction the subject property. Eight borings were drilled to a total depth of 20 feet and two borings were drilled 10 feet deep. Foundry sand was identified in the near surface soils in eight of the ten soil borings (B-1, B-2, B-3, B-4, B-5, B-6, B-8, and B-10) and ranged in thickness from two to eight feet. Foundry sand was not encountered in soil borings B-7 nor B-9. These two borings are located on the northwest side of the subject property (the side nearest the former landfill). None of the borings encountered landfill materials except for a trace amount of brick and wood rubble in borings B-1, B-2, B-3, B-4, B-6, B-7, B-8, and B-10. The Warzyn report recommended constructing the footings on the native soils present below the fill materials identified during the Warzyn investigation or by overexcavating the surficial fill materials and reestablishing the construction grade with an engineered fill.

The WDNR does not require removal of foundry sands from areas previously filled with this material. However, if the foundry sands are encountered and are removed during development activities, then the WDNR requires that this material is handled as a solid waste and property disposed.
