RE: Modification to the work plan for the Noise Variance granted to the Motor Castings Company

Sally;

The purpose of this letter is to formally request a modification to the work plan for the Noise Variance originally issued February 2, 2011 and amended May 21, 2012 and extended in February 2013.

The basis for the change in the work plan is as follows.

The current work plan calls for

Installation of an outdoor curtain barrier around the dust collector silos similar to Kinetics KNC-ENV-100BQQ installed around the north, south, and east sides of the dust collectors and extend from the top of the dust collectors down (and slightly overlap) to the level of the fan barrier referred to above was estimated at \$15,000 plus installation costing approximately ½ of the cost of the material or \$7,500 for a total of \$22,500. The current cost is now quoted at \$115,270.

As an alternative

We are proposing to shut the "pulsers" off on a daily basis for the period of time between 10:00 PM and 7:00 AM while we search for a more cost effective alternative to the curtains outlined above.

We believe that this can be accomplished without any long term detrimental effect on the dust collector.

This effectively eliminates the noise for that time period between 10:00 PM and 7:00 AM that the curtains were recommended to reduce.

Please contact me if you have any questions.

Sincerely;

Joseph Kempen
Motor Castings Company
