3A. Conditional Use Permit for Living Hope Lutheran Church, a proposed Religious Institution use at 1337 S. 100 St.

3B. Site, Landscaping, and Architectural Design Review for Living Hope Lutheran, an existing Religious Institution use, at 1337 S. 100 St. (Tax Key No. 444-0534-002).

Project Overview

Living Hope Lutheran Church is requesting a Level 2 Site, Landscaping and Architectural Design review and Board of Appeals review to approve the propsoed building renovations to their existing property located at 1337 S. 100 St. The property is zoned RA-3, and Religious Institutions are allowed in this district as Conditional Uses.

The entire scope of the project includes the following:

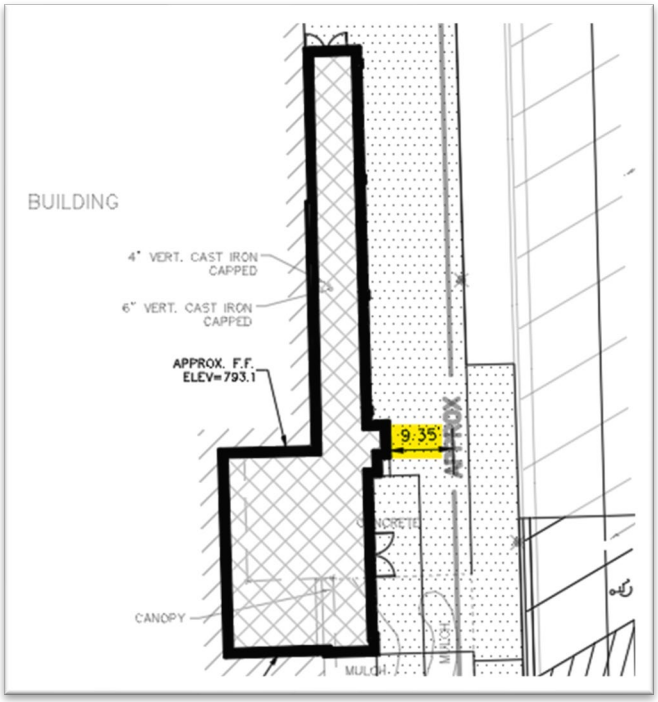
- 17,344 sq. ft. interior remodel of the first floor to convert the space from a school to a space more aligned with a church.
- A 1,200 sq. ft. canopy and vesibule to provide an enclosed ADA ramp between two sections of the building
- A steeple/tower addition to provide a stronger building presence along S. 100 St.

This property was formerly used as Living Hope Lutheran Church's school and daycare, meant to serve its congregation.The use of the building has altered over time with the relocation of the school to 2217 S. 99 th St., prompting the use of the building to shift toward a Religious Institution use.

Site and Landscaping Plans

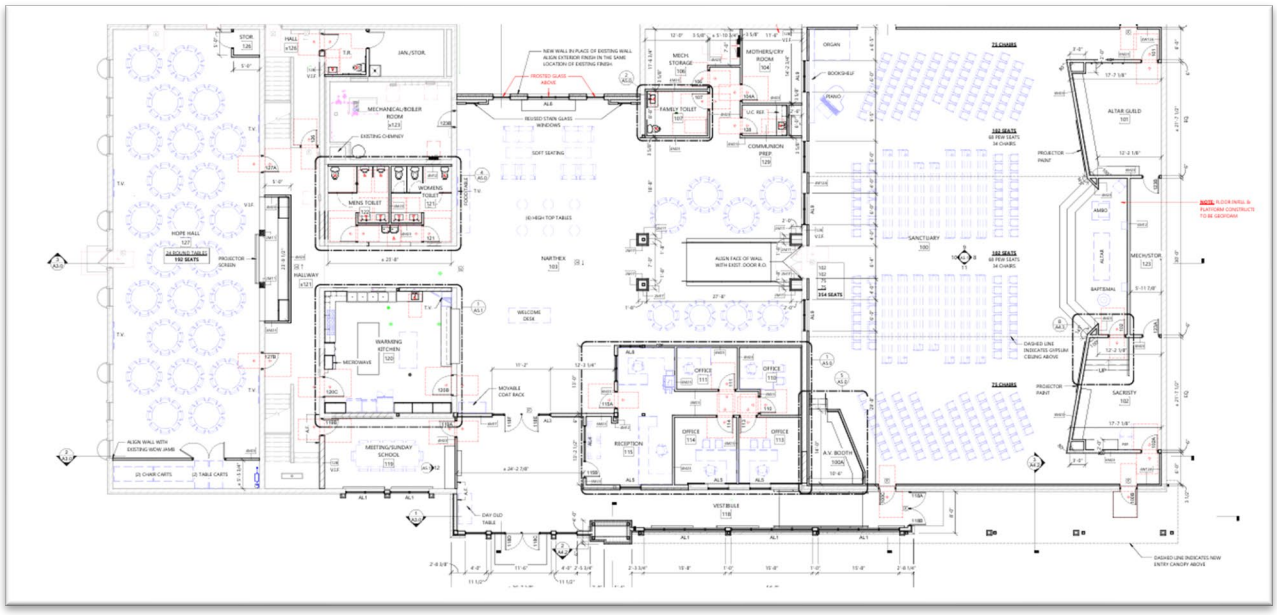
The primary building on site, which formerly was utilized as a school and daycare, is roughly 17,000 sq. ft. in area presently. The site plan for this project indicates the construction of a new, enclosed ADA ramp and vestibule addition to the front of the building abutting S 100th St., indicating an additional 1,200 sq. ft. of addition proposed through this project. The 1,200 sq.ft. ADA ramp vestibule must obtain an area variance to Sec 19.41 of the WAMC in order to be placed closer than 20 ft (the minimum front setback distance) from the front lot line of the property. If granted through the Board of Appeals, whose meeting

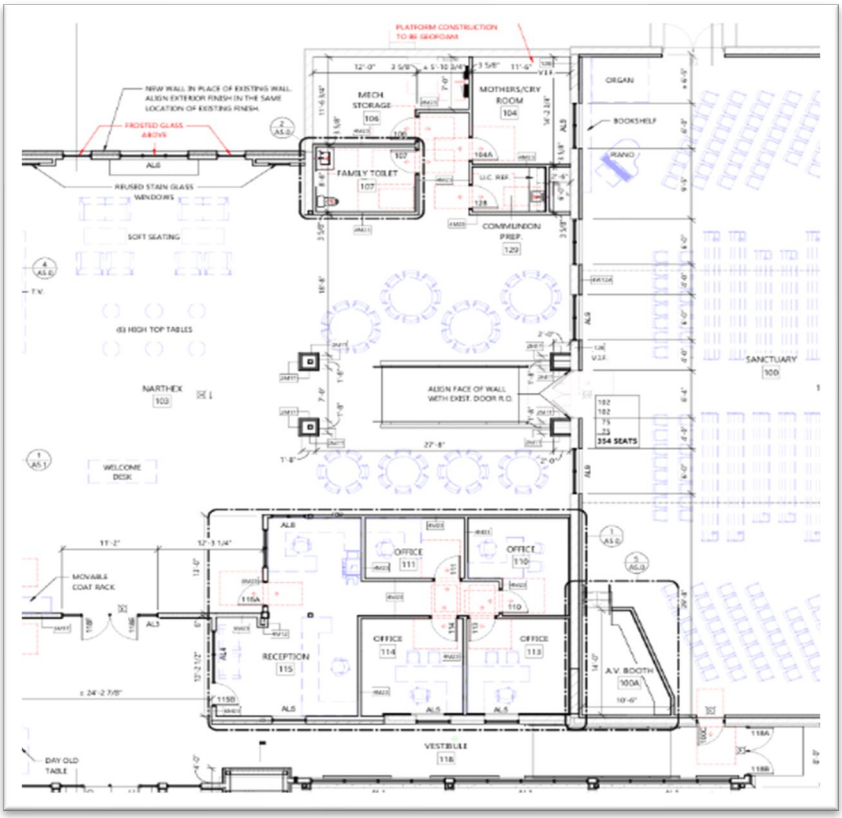
will be held on June 23rd prior to Plan Commission, the ADA ramp will be allowed to be located 9.35 ft from the front property line.



Other components of the site plan indicate 65 parking spaces directly serve this building, with some additional parking available on the adjoining lot where the church offices are located. There is also street parking along S. 100 St. A dumpster enlosure is shown toward the rear of the site and is screened with a 4-sided enclosure and gate on a concrete pad north of the main parking lot of this building. A small playset and playgound abut a wood retaining wall directly behind the back of the primary building, accompanied by a grass landscaped area and small wooded region just south of the playground. To the east of the playgound, a basketball hoop, planter, and concrete retaining wall are situated adjacent to the building. Intentionally curated landscaping is located along the easternmost wall of the primary building, fronting S. 100th St. While this site currently supports grass landscaping with mulched planter beds, existing features such as the southernmost tree and a small set of stairs will be removed to accommodate the new enclosed ADA ramp and vestibule. These plans also show that the existing water laterals will be capped and abandoned per City standards.

Floor Plan

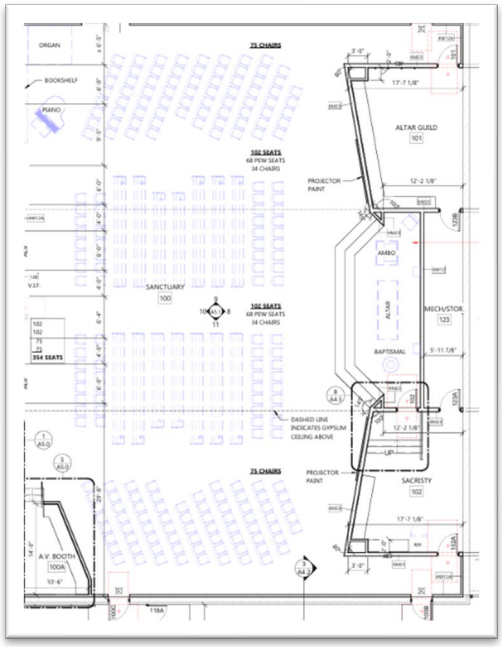


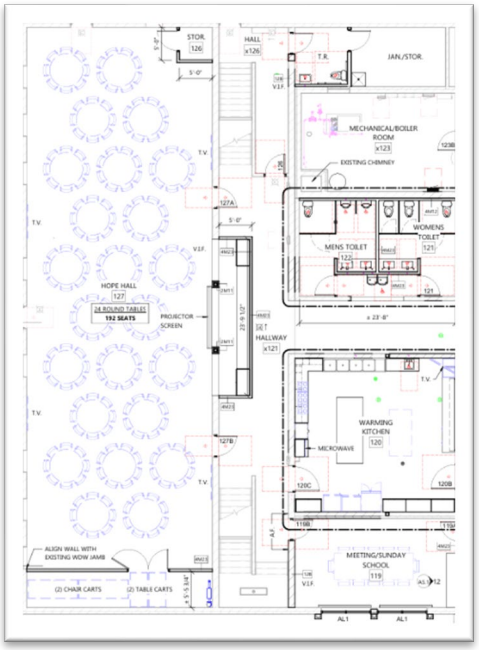


With the addition of the new enclosed ADA ramp and vestibule, the entrance to the building will differ compared to the past entryway. From the vesibule, the congregation will primarily enter through a large, reception area which will directly abut a reception office and four other assorted offices.

Another entrance will lead directly from the ADA ramp into the service room, where the former school gymnasium will be converted to accommodate 354 seats for the congregation in the sanctuary. Behind these seats, a piano, organ, and A.V. room will be placed. The seating in this room will face an altar, altar guild, sachristy, and a storage room. Two methods of egress to this room will be located to the western wall, one entrance through the vesibule will provide egress to the east, and another emergency exit is located along the same eastern wall.

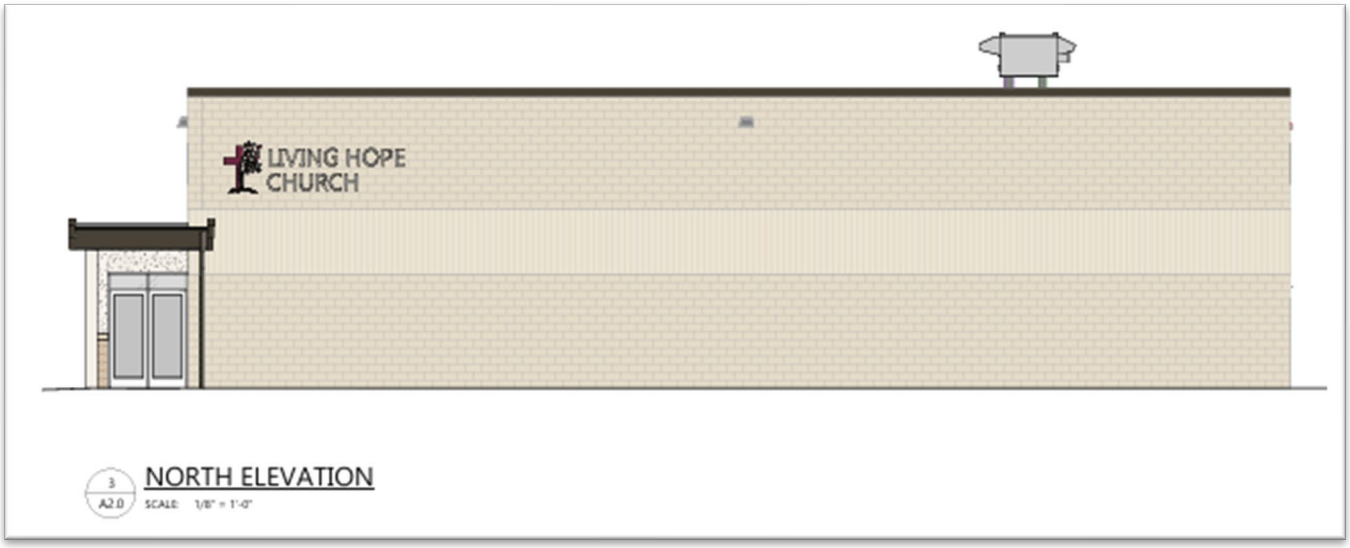
Directly south of the sanctuary, a storage room, family restroom, mothers/crying room, and communion prep. Room are located near some scattered seating arrangements. Toward the southern end of the building, several classrooms and existing, non-ADA compliant restrooms will be converted to a warming kitchen, Sunday School room, two new ADA-compliant restrooms, janitorial and storage rooms, and a large hall accomodating 192 seats for the congregation. No second floor plan has been submitted for review.



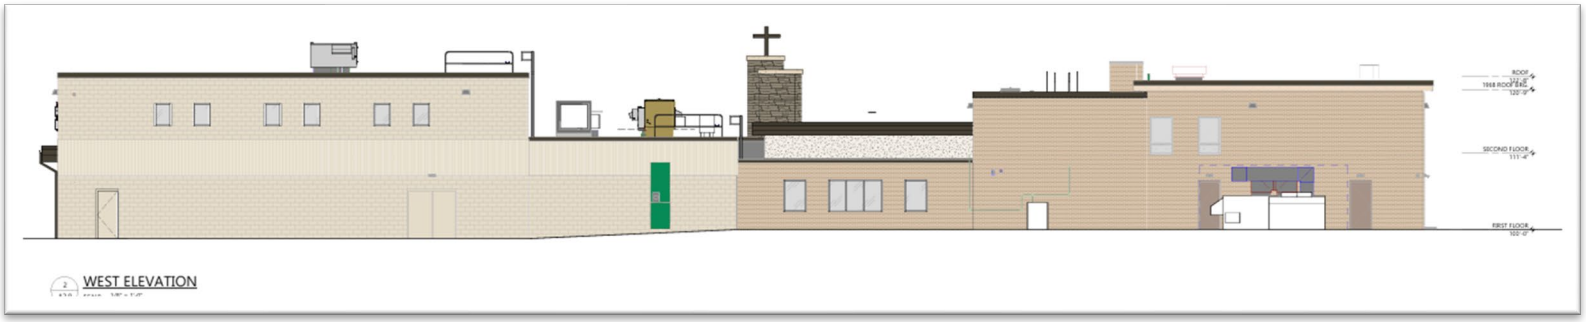


Architectural Elevations

Most of the architectural elevations details will remain the same as they historically have through servicing the school. An exterior material key was provided for new features on the site and include stone veneer, brick veneer, prefinished metal trim, engineered wood trim, cast stone sills, and EIFS. Staff note that EIFS is not an approved exterior finish material due to its lack of durability demonstrated over time. This material should be replaced with a different, higher quality exterior finish material.

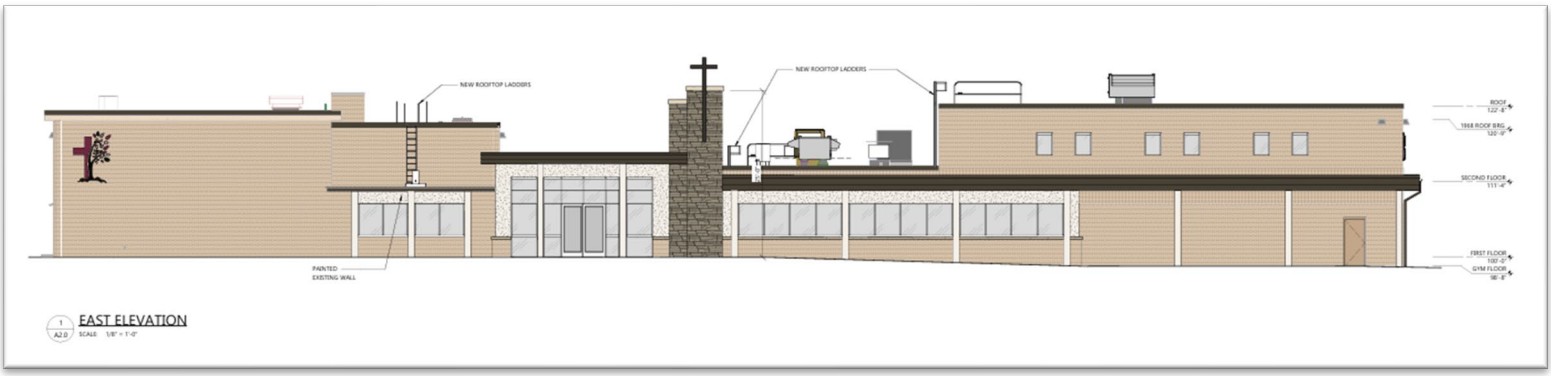


The north elevation will remain largely unchanged, with a new sign advertising the church indicated on this façade. The entrance to the ADA ramp and vestibule is shown on this plan.



The western elevation will remain the same as it has in the past, supporting four methods of egress to the playground area.

The south elevation will also remain largely unchanged, aside from showing a portion of the new ADA ramp and vesibule. One method of egress is provided on this plan.



The eastern elevation, directly fronting S. 100th St. will experience the greatest level of changes reflected on the architectural elevation plan. Here, the full length of the ADA ramp and vestibule is fully shown. Three new rooftop ladders are also shown, with a new tower created to establish a stronger presence for the building as a church. New signage is indicated on this plan.

Recommendation: Approval of Site**,** Landscaping, and Architectural Design Review for Living Hope Lutheran, an existing Religious Institution use, at 1337 S. 100 St. (Tax Key No. 444-0534-002) subject to the following conditions:

1. Conditional Use application submitted to the Planning Department for Common Council approval the change of the former School and Group Child Care uses of the building to accommodate the new Religious Institution use.
2. Revised Site, Landscaping, and Architectural plans submitted to show the following: a) submission of a second-floor plan for review by the Planning Department. b) The replacement of EIFS as a material indicated on the architectural elevation plans in favor of a durable, high-quality exterior finish material.
3. A stormwater checklist submitted and approved by the Engineering Department. Contact Robert Hutter, Assistant City Engineer at 414-587-1699.
4. Plan Review, Building Permit, and Change of Use submitted to the Commercial Construction Inspector. Contact Shelly Kerwin at 414-302-8412.

Project Narrative

Project: Living Hope Lutheran Church
1337 S 100th Street
West Allis, WI 53214

Living Hope Lutheran Church is requesting Level 2 Site, Landscaping & Architectural Design review and Board of Appeals review and approval for building renovations and site improvements to their existing property located at 1337 S 100th Street in the City of West Allis. The property is zoned RA-3 and an existing conditional use permit is in place.

Project scope includes a 17,344 sf interior remodel of the existing first floor of the building where they are currently using the existing gym space for worship. The interior remodel will transform the look of the interior of the existing gym to be more suitable, safer, and functional for worship and fellowship. Additionally, spaces where there are currently existing classrooms will be remodeled with the removal of walls to provide a large Narthex/ Lobby space for gathering. The existing toilet rooms will be remodeled to meet ADA accessibility requirements. Additional existing classrooms and storage space will be remodeled for a new kitchen to sever the proposed Hope Hall Room which is a remodeled space of three existing classrooms (along the south side of the building). The existing kitchen and toilet rooms will be removed and remodeled to create administration space and additional Narthex support space. As part of this project, there is a proposed approximate 1,200 sf canopy/ vestibule and steeple/ tower addition which will give the building a stronger presence along S. 100th Street and identify the building as a church instead of as a school which it once was.

The proposed addition will be located on the east side of the existing building and will encompass approximately 1,200 square feet. The project consists of the construction of a new enclosed vestibule and corridor that will provide a direct connection between the primary building entrance and the sanctuary entrance to the north. The vestibule and connecting walkway have been designed to improve ADA accessibility within the facility. This addition will allow for a safe and compliant route between the two entrances while maintaining a fully enclosed connection. The architectural design of the addition has been developed to complement the existing structure. Building materials and finishes, as illustrated in the submitted elevation drawings, will include stone and brick veneer selected to match the colors and character of the existing building. The addition will be visually cohesive and integrated with the current architecture. The total area of site disturbance associated with this project is approximately 0.03 acres. The proposed addition will enhance accessibility, safety, and usability of the building while maintaining consistency with the existing architectural aesthetic.

Relief is requested from municipal code section 19.42 Building Size and Location. The variance request meets the four (4) zoning variance requirements as noted below:

1. There are exceptional or unique conditions specific to the property that do not generally apply to other properties in the same zoning district.

100 Camelot Drive | Fond du Lac, WI 54935
920.926.9800 | excelengineer.com

- The property has a unique existing condition in that the building predates the current zoning code/ setback requirements. Additionally, the primary entrance and the sanctuary have different finish floor elevations, requiring an ADA compliant route for occupants to move between spaces. These combined factors create a constraint that is not typical of other properties in the zoning district. To provide a safe, ADA-compliant route, the addition must align with existing entrances. Because the building already encroaches into the required setback, there is no feasible way to construct this connection without further encroachment. The proposed 9.35-foot setback is therefore driven by the existing building placement and the need to create a safe and accessible connection, representing a condition unique to this property.

2. Without the variance, the property cannot be reasonably used in a manner consistent with the zoning code.
    - Without the variance, the property would be unable to provide an additional ADA-compliant accessible route between the main entrance and the sanctuary. The existing building's placement within the setback already limits available options for expansion. Strict compliance with the 20-foot setback would prevent proper alignment and grading of the walkway, making it impractical to construct a safe, accessible connection. As a result, members of the church that require ADA compliance would not have equitable access between key areas of the building, creating both safety concerns and noncompliance with accessibility standards. The variance is necessary to allow the property to function safely and reasonably for all users.

3. The variance will not be harmful to the public interest; nor will it negatively impact neighboring properties or undermine the intent of the zoning code.
    - The additional encroachment into the building setback is directly related to the new ADA ramp/ access corridor, thus making the building safer for the public. The addition is the minimum size necessary and is going over existing green space/ sidewalk and does not encroach on the public sidewalk therefore all public access remains the same and will not negatively impact the surrounding area. The proposed addition will match the existing structure and surrounding properties. The addition improves safe circulation within the building by providing a clearly defined, accessible route between entrances. It will not generate additional traffic, noise, or adverse impacts to neighboring properties. Because the variance supports improved safety and accessibility while maintaining consistency with the existing site conditions, it does not undermine the intent of the zoning code.

4. The hardship was not self-created by the property owner through actions such as subdividing, building, or altering the property.
    - The hardship is not self-created, as it originates from the existing placement of the building, which is already within the required 20-foot setback, and from the original layout that separates key building functions without an accessible connection. These conditions predate the current project. The property owner is seeking to address these limitations by improving safety and accessibility through the addition of an ADA-compliant connection. The need to encroach further into the setback is a direct result of working within the constraints of the existing structure, rather than any action taken by the current owner. The variance is

therefore necessary to correct an existing condition, not one that was self-imposed.

The proposed facility will operate as a church providing Bible Study and Sunday School classes. Hours of operation are Sunday from 7 AM – 1 PM, weeknights from 5 PM – 8 PM for Bible Study and various Bible Study classes, and Saturdays from 10 AM – 12 PM and 5 PM – 7 PM. Construction is anticipated to begin in November and is expected to be completed in early 2027. The estimated project cost is $4.5 million.
