13. [Do the Residential springs look different then the commercial?](#)
14. [Should I lubricate the Green Hinge?](#)

Answers

1. The difference between the residential and commercial hinge is the spring tension has been optimized for the best door performance, based on the typical doors used in residential and commercial applications. If a residential door is 12 feet wide or more commercial hinges should be used.
2. Our system is built to last; with a spring that exceeds 10,000,000 life cycles.
3. Yes, the existing 7/16" shaft and attached wheels are very common in 99% of overhead doors. The Green Hinge is designed to work effectively with these common shafts and wheels. Any additional adjustment required can be handled by your installation professional.
4. Each panel can automatically adjust to overcome poor track positioning and warped walls. Most Important the doors themselves only have one true sealing surface and that is the outer panel edge where it contacts the wall. Most door panels are corrugated where the seal contacts, still leaving air gaps with traditional seals.
5. You can check on the status of your order by clicking on [Order Status](#) or by clicking on the link on your order confirmation e-mail to review your order. If a tracking number is assigned to your order, you can track the order by logging in to Order Status and reviewing your order.
6. The majority of doors do not need special adjustments. On a rare occasion the motor drive tension may be adjusted. Your door professional can easily make this minor adjustment if necessary after installing the Green Hinge System.
7. If you forgot your password, you can retrieve it by clicking on the [Forgot Password](#) link on the [Order Status](#) page or during the checkout process while placing a new order.
8. Our return policy is available on the [Terms of Sale](#) agreement.
9. Absolutely not: We do not sell, trade, or share any of your information with anyone under any circumstances. [Click here to review our Privacy Policy](#)
10. Yes, your personal information is securely stored in our Ecommerce database with the same SSL

Button up that garage door

I heat my garage shop full time, and when I'm outside on dark winter nights, I can see a lot of light between the weather stripping and the overhead door. Light = lost heat = untold dollars' worth of BTUs pouring outside. The problem is that there's so much space between the rollers and the track that the door doesn't stay tight against the weather stripping.

I just invested in the Green Hinge System to solve the problem. The design is simple but brilliant. Each replacement Green Hinge has a built-in spring that pushes the door against the weather stripping for a much better seal. The hinges also quiet the door because the rollers don't rattle around in the track. It's a well-made product and I fully expect it to cut my heating costs this winter.

A set of six hinges costs about \$85. Go to [greenhingeofamerica.com](#) to look them over and choose the right ones for your door size.
