STAFF REPORT
WEST ALLIS PLAN COMMISSION

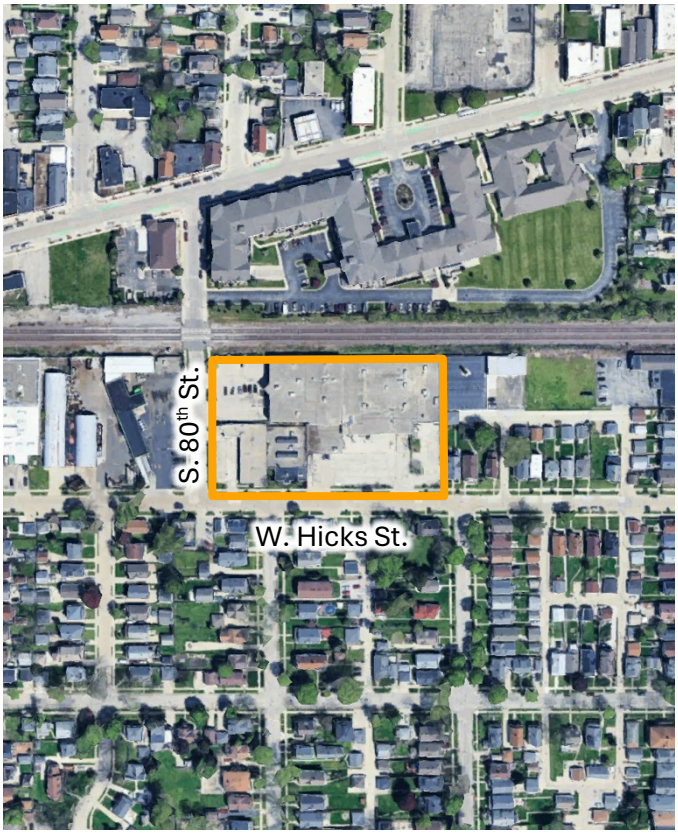
2. Site, Landscaping, and Architectural Design Review for Storage Five West Allis, a proposed Light Industrial use, at 7840 W. Hicks St. (Tax Key No. 477-0142-000)

Overview and Zoning

Storage Five is proposing a new multi-story, 133,532 sq. ft. climate controlled self-storage business. The proposed business will renovate and expand an existing industrial building to accommodate the new self-storage facility.



The timeline for completion of the work is expected to take 12-18 months from the issuance of building permits.

Hours of Operation:

- Office: 9:30 a.m. – 6:00 p.m.
- Customer Access: 6:00 a.m. – 10:00 p.m.
- 24/7 Access is available but requires management approval

7840 W. Hicks St. is zoned I-1. In the I-1 zoning district, self-storage is considered a Light Industrial use which is Limited in the I-1 District. Limited Use Criteria permits self-storage if the lot is at least 2 acres and at least 20% of the lot is landscaped.

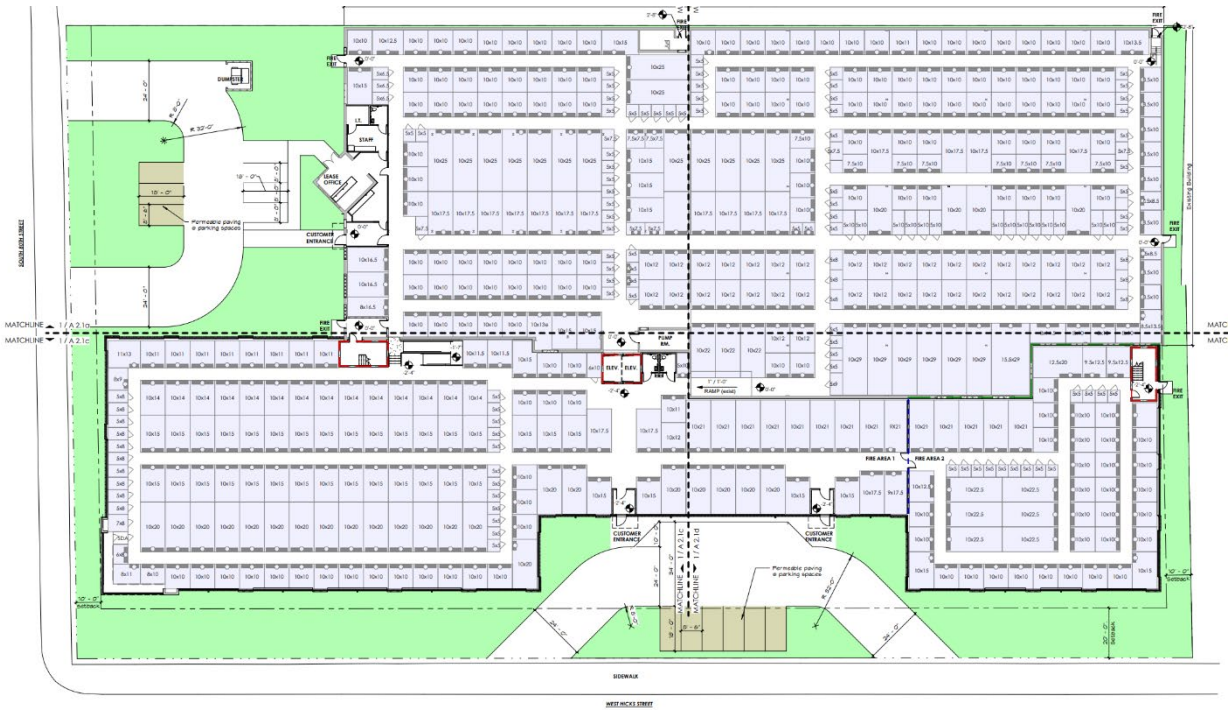
Site & Landscaping Plan

The proposal includes a plan to completely renovate and repurpose the existing industrial building on-site. The existing building has been expanded multiple times. The portion of the building to be repurposed is located on the northern portion of the lot. The new 2-story addition is to be located to the south of these existing areas. The proposed front setback of the addition is 26.3 ft and the side setback is 10 ft. Both setbacks meet the minimum setbacks required for the I-1 district. The maximum floor area ratio (FAR) for the building in the I-1 district is 1.5. The proposed FAR for this project is below that maximum at 1.17 FAR.

Site access is given off of both Hicks St and 80th St through a total of 4 driveways leading into two semi-circular drives. These semi-circular drives lead different entrances for the storage facility. Connected to these drives are parking areas. The total parking on site is 11 stalls, well below the maximum allowed. No bicycle racks were shown on the proposed plans. Per the gross square footage of the building, 10 bike racks are required. It is recommended that the bicycle racks are separated between the west and south entrances of the proposed facility.

Per Zoning Code regulations, a minimum of 20% of the lot is required to be landscaped/permeable for the Light Industrial use to be permitted. The project area is 114,426 sq. ft., which requires approximately 22,452 sq. ft. of landscaped/permeable area. The plans show the existing pervious area increasing from 7,900 sq. ft. to 22,452 sq. ft. through a combination of landscaping and permeable paving. This results in no net increase in total impervious area and satisfies the 20% minimum requirement.

The landscaping shown on the site primarily functions to aesthetically soften the building. A variety of bushes and shrubs line the perimeter of the public facing portions of the building. Additionally, the two permeable parking areas near the semi-circular driveways both are screened with shrubs and trees. The refuse area on site is also screened with trees in addition to fencing.



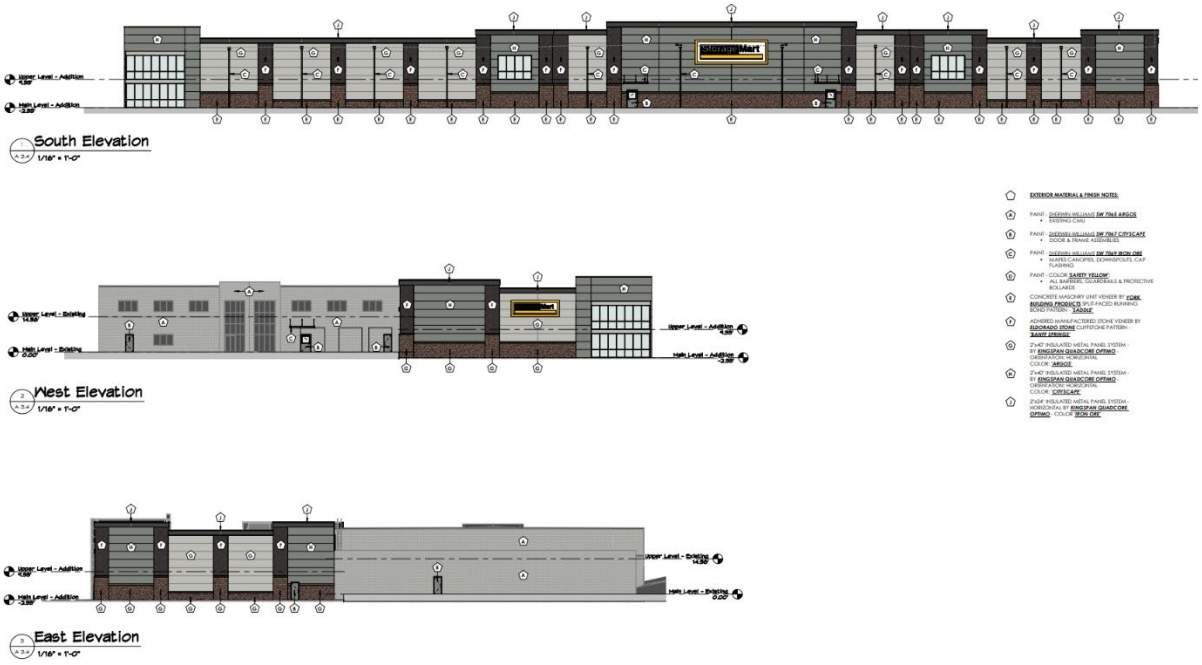
Architectural Plan

The submitted architectural elevations show a substantial exterior renovation of the existing industrial building and the construction of a new two-story addition. The updated plans include exterior material and finish notes, including painted existing CMU, painted door and frame assemblies, painted accessory items such as exposed gutters/downspouts and cap flashing, concrete masonry unit veneer, adhered manufactured stone veneer, and insulated metal panel systems in coordinated gray tones. The south elevation, which is the primary elevation visible from W. Hicks St., includes the greatest level of architectural treatment, with storefront-style glazing, brick/stone base elements, vertical masonry accents, horizontal metal paneling, varied parapet heights, entrance canopies, and wall plane/material changes to reduce the appearance of a long industrial façade.

The west elevation includes similar treatment near the customer entrance and addition, while portions of the existing building remain more utilitarian in appearance. The north and east elevations are less detailed and appear to retain existing wall area, which is less visible from the primary public frontages but should still be maintained in a finished condition.

Staff notes that signage is shown on the elevations for general design intent. Final sign location, size, illumination, color, and style will require separate review through the sign permit process. Given the residential properties across W. Hicks St., staff recommends that final signage and

lighting be reviewed to ensure compliance with City standards and to limit unnecessary glare or visual impacts toward nearby residences.



Floor Plan

The interior floor plan is designed to maximize the amount of climate-controlled storage space within the renovated building and new addition. A total of 884 storage units are shown across two levels, with 532 units on the main level and 352 units on the upper level. The main level includes customer entrances on the west and south sides, a leasing office on the west side, staff/support spaces, restrooms, storage corridors, and fire exits. The upper level is accessed by stairs and elevators located near the central customer circulation area. The plans also show a pump room and interior fire-area separation, with most of the upper level dedicated to storage units.

RENOVATION NOTES

Public Comment

The applicant hosted a public neighborhood meeting for the project on June 18, 2026, from 4:00 p.m. to 8:00 p.m. The meeting was intended to provide the community with an opportunity to review the proposal and discuss questions directly with the project applicant.

Staff received public comments regarding the proposed redevelopment, including concerns about the proximity of the use to nearby residential properties, the overall fit of a self-storage facility near homes, and the potential for moving trucks or related customer traffic to travel through residential streets. Staff also received a nearby resident phone inquiry regarding the potential for moving truck traffic in the neighborhood.

In response to these comments, the applicant stated that self-storage is generally one of the quieter and less intensive uses allowed in the I-1 District and that most customers are expected to access the facility by personal vehicle. The applicant further stated that large moving trucks are expected to be rare, that smaller box truck activity is more common but still substantially less frequent than personal vehicle trips, and that customer visits vary widely, with some tenants visiting often and others visiting infrequently.

Staff recommends conditions related to final landscaping, lighting, signage, bicycle parking, and architectural details as shown on the approved plans. Any substantial modifications to site circulation or access arrangements shall be subject to staff review and approval.

Design Guidelines

The proposal is considered a significant redevelopment and is therefore subject to the City's Design Review Guidelines. Overall, staff finds that the project generally meets the intent of the applicable guidelines through the adaptive reuse of an existing industrial building, architectural enhancements, additional landscaping, permeable paving, and improved customer access and circulation. While a self-storage facility does not create the same level of street activity as commercial or mixed-use development, the proposal incorporates new entrances, storefront glazing, sidewalks, landscaping, and internalized vehicle circulation that improve the site's relationship to the public realm. The architectural improvements, including updated materials, wall treatments, canopies, and coordinated building elements, substantially enhance the appearance of the property.

See attached Plan Commission checklist for further reference.

Recommendation: Approve the Site, Landscaping, and Architectural Design Review for Storage Five West Allis, a proposed Light Industrial use, at 7840 W. Hicks St. (Tax Key No. 477-0142-000) subject to the following conditions:

1. All required building, occupancy, stormwater, and related permits shall be obtained prior to commencing work or occupying the facility.
2. Submittal of revised plans to the Planning & Zoning office showing the required bicycle parking spaces for 10 bicycles, preferably split between the west and south customer entrances where practical.
3. Final signage shall require separate review and approval through the sign permit process and shall comply with all applicable location, size, illumination, and design standards.
4. Final site, civil, landscaping, architectural, lighting, stormwater checklist, and utility plans shall be submitted for review and approval by the applicable City departments prior to permit issuance.
5. The applicant shall coordinate construction staging details with City staff and any complete any drive-way and right-of-way permits.

3A. Conditional Use Permit for Living Hope Lutheran Church, a proposed Religious Institution use at 1337 S. 100 St.

3B. Site, Landscaping, and Architectural Design Review for Living Hope Lutheran, an existing Religious Institution use, at 1337 S. 100 St. (Tax Key No. 444-0534-002).

Project Overview

Living Hope Lutheran Church is requesting a Level 2 Site, Landscaping and Architectural Design review and Board of Appeals review to approve the propsoed building renovations to their existing property located at 1337 S. 100 St. The property is zoned RA-3, and Religious Institutions are allowed in this district as Conditional Uses.

The entire scope of the project includes the following:

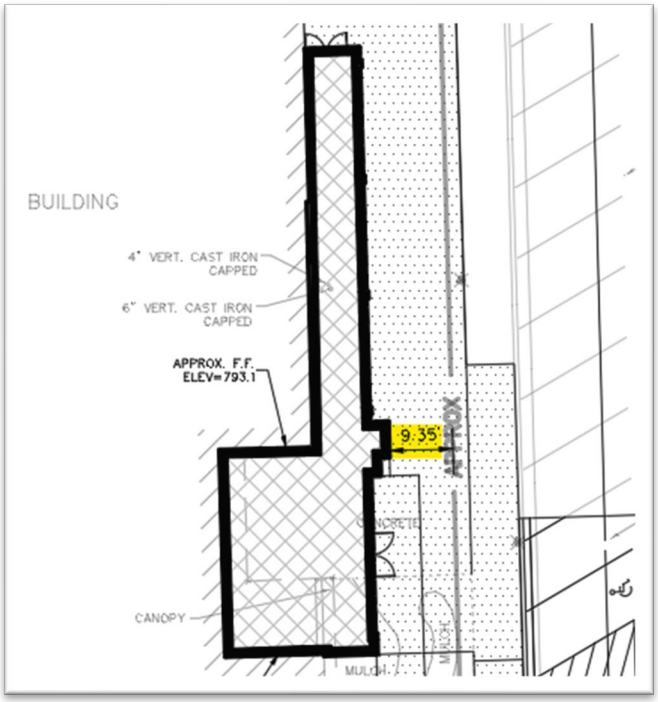
- 17,344 sq. ft. interior remodel of the first floor to convert the space from a school to a space more aligned with a church.
- A 1,200 sq. ft. canopy and vesibule to provide an enclosed ADA ramp between two sections of the building
- A steeple/tower addition to provide a stronger building presence along S. 100 St.

This property was formerly used as Living Hope Lutheran Church's school and daycare, meant to serve its congregation.The use of the building has altered over time with the relocation of the school to 2217 S. 99 th St., prompting the use of the building to shift toward a Religious Institution use.

Site and Landscaping Plans

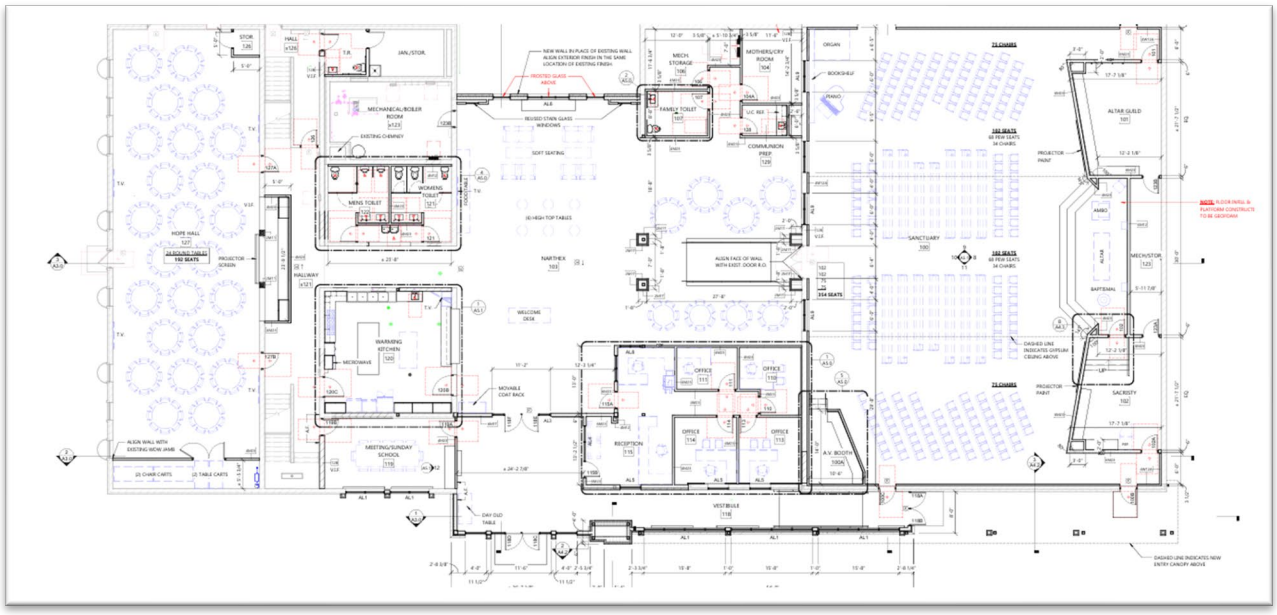
The primary building on site, which formerly was utilized as a school and daycare, is roughly 17,000 sq. ft. in area presently. The site plan for this project indicates the construction of a new, enclosed ADA ramp and vestibule addition to the front of the building abutting S 100th St., indicating an additional 1,200 sq. ft. of addition proposed through this project. The 1,200 sq.ft. ADA ramp vestibule must obtain an area variance to Sec 19.41 of the WAMC in order to be placed closer than 20 ft (the minimum front setback distance) from the front lot line of the property. If granted through the Board of Appeals, whose meeting

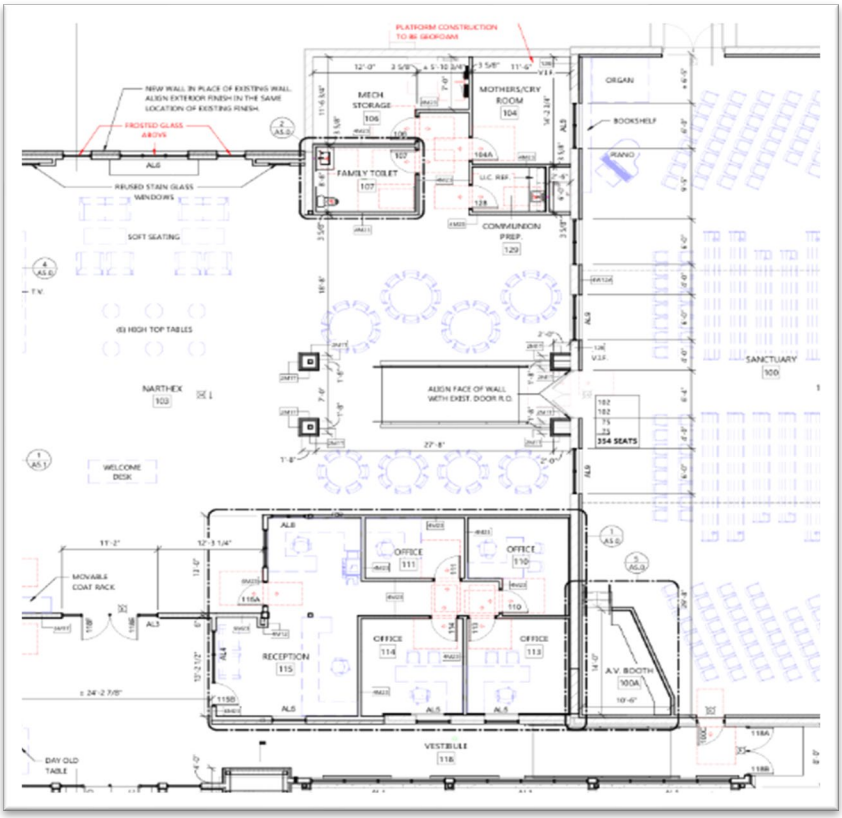
will be held on June 23rd prior to Plan Commission, the ADA ramp will be allowed to be located 9.35 ft from the front property line.



Other components of the site plan indicate 65 parking spaces directly serve this building, with some additional parking available on the adjoining lot where the church offices are located. There is also street parking along S. 100 St. A dumpster enlosure is shown toward the rear of the site and is screened with a 4-sided enclosure and gate on a concrete pad north of the main parking lot of this building. A small playset and playgound abut a wood retaining wall directly behind the back of the primary building, accompanied by a grass landscaped area and small wooded region just south of the playground. To the east of the playgound, a basketball hoop, planter, and concrete retaining wall are situated adjacent to the building. Intentionally curated landscaping is located along the easternmost wall of the primary building, fronting S. 100th St. While this site currently supports grass landscaping with mulched planter beds, existing features such as the southernmost tree and a small set of stairs will be removed to accommodate the new enclosed ADA ramp and vestibule. These plans also show that the existing water laterals will be capped and abandoned per City standards.

Floor Plan

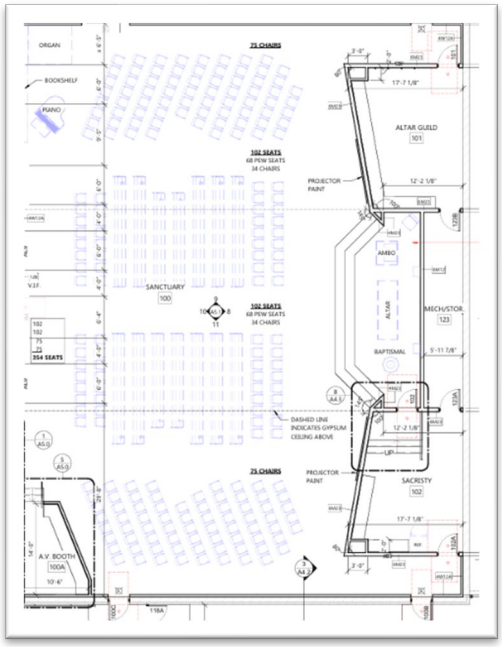


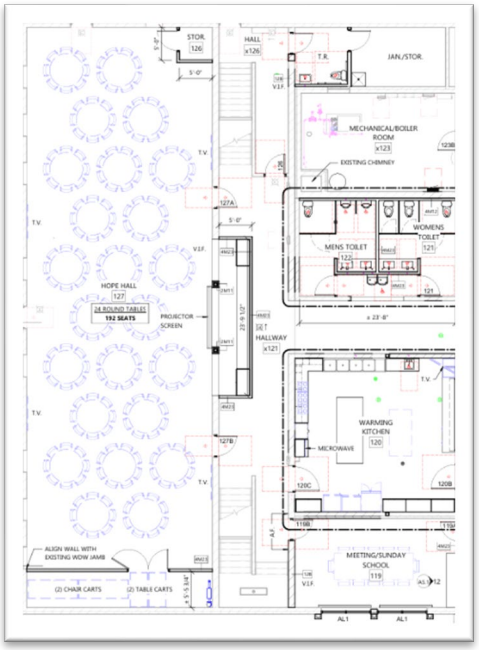


With the addition of the new enclosed ADA ramp and vestibule, the entrance to the building will differ compared to the past entryway. From the vesibule, the congregation will primarily enter through a large, reception area which will directly abut a reception office and four other assorted offices.

Another entrance will lead directly from the ADA ramp into the service room, where the former school gymnasium will be converted to accommodate 354 seats for the congregation in the sanctuary. Behind these seats, a piano, organ, and A.V. room will be placed. The seating in this room will face an altar, altar guild, sachristy, and a storage room. Two methods of egress to this room will be located to the western wall, one entrance through the vesibule will provide egress to the east, and another emergency exit is located along the same eastern wall.

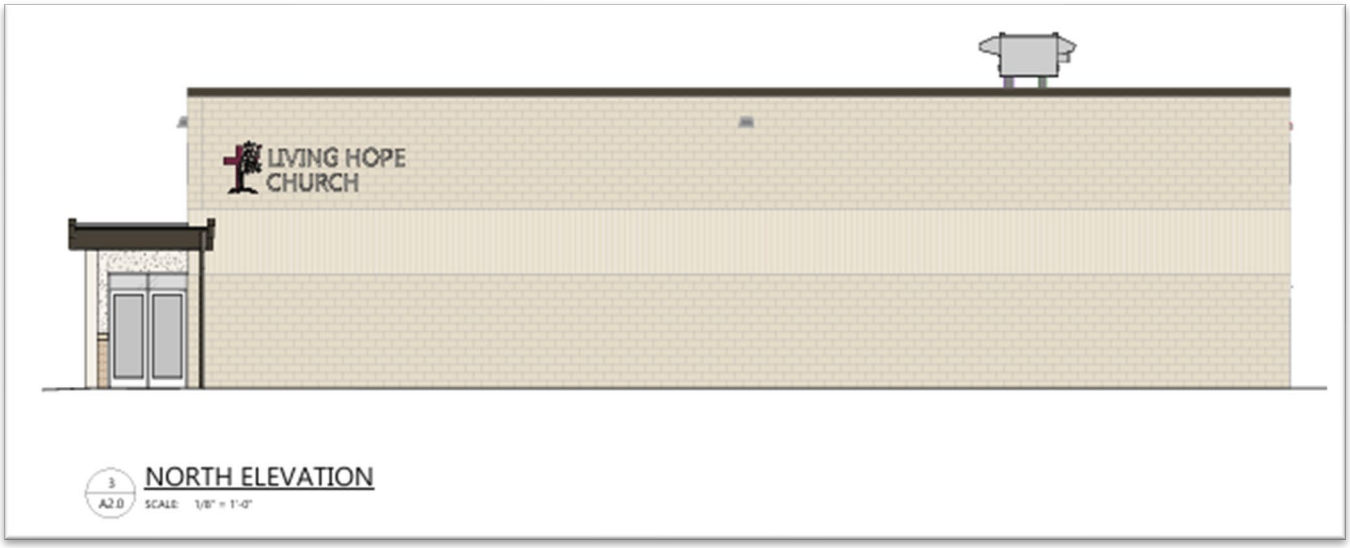
Directly south of the sanctuary, a storage room, family restroom, mothers/crying room, and communion prep. Room are located near some scattered seating arrangements. Toward the southern end of the building, several classrooms and existing, non-ADA compliant restrooms will be converted to a warming kitchen, Sunday School room, two new ADA-compliant restrooms, janitorial and storage rooms, and a large hall accomodating 192 seats for the congregation. No second floor plan has been submitted for review.



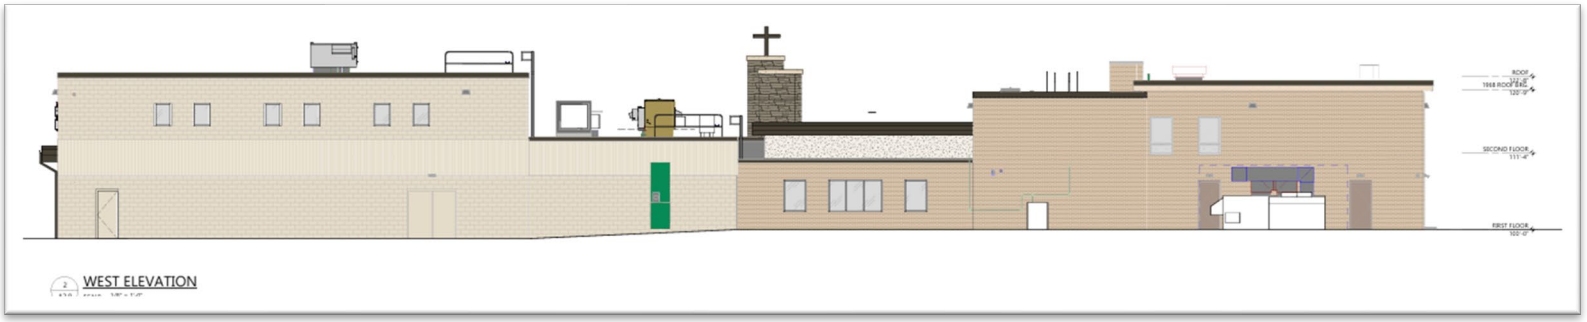


Architectural Elevations

Most of the architectural elevations details will remain the same as they historically have through servicing the school. An exterior material key was provided for new features on the site and include stone veneer, brick veneer, prefinished metal trim, engineered wood trim, cast stone sills, and EIFS. Staff note that EIFS is not an approved exterior finish material due to its lack of durability demonstrated over time. This material should be replaced with a different, higher quality exterior finish material.

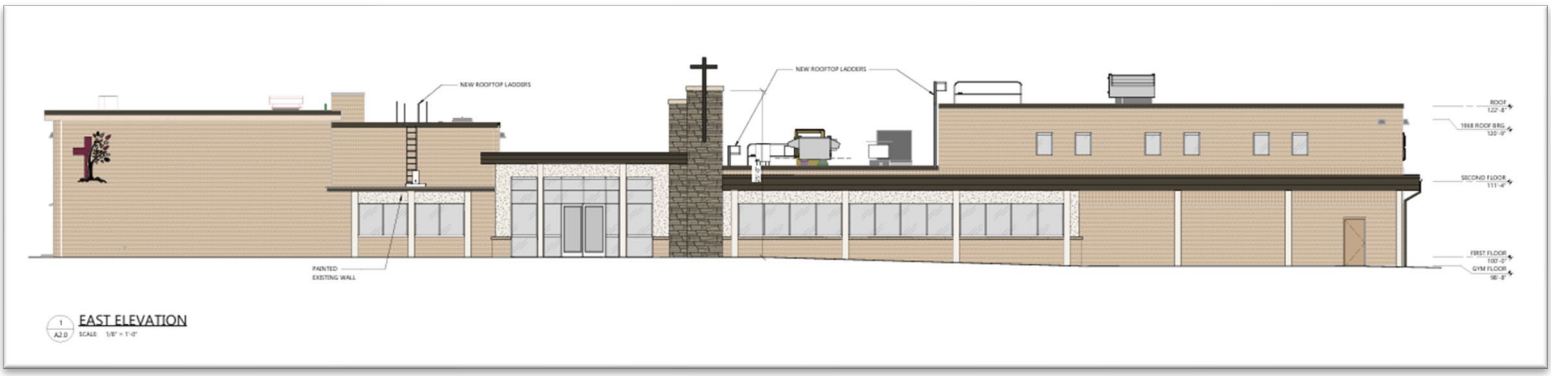


The north elevation will remain largely unchanged, with a new sign advertising the church indicated on this façade. The entrance to the ADA ramp and vestibule is shown on this plan.



The western elevation will remain the same as it has in the past, supporting four methods of egress to the playground area.

The south elevation will also remain largely unchanged, aside from showing a portion of the new ADA ramp and vesibule. One method of egress is provided on this plan.



The eastern elevation, directly fronting S. 100th St. will experience the greatest level of changes reflected on the architectural elevation plan. Here, the full length of the ADA ramp and vestibule is fully shown. Three new rooftop ladders are also shown, with a new tower created to establish a stronger presence for the building as a church. New signage is indicated on this plan.

Recommendation: Approval of Site**,** Landscaping, and Architectural Design Review for Living Hope Lutheran, an existing Religious Institution use, at 1337 S. 100 St. (Tax Key No. 444-0534-002) subject to the following conditions:

1. Conditional Use application submitted to the Planning Department for Common Council approval the change of the former School and Group Child Care uses of the building to accommodate the new Religious Institution use.
2. Revised Site, Landscaping, and Architectural plans submitted to show the following: a) submission of a second-floor plan for review by the Planning Department. b) The replacement of EIFS as a material indicated on the architectural elevation plans in favor of a durable, high-quality exterior finish material.
3. A stormwater checklist submitted and approved by the Engineering Department. Contact Robert Hutter, Assistant City Engineer at 414-587-1699.
4. Plan Review, Building Permit, and Change of Use submitted to the Commercial Construction Inspector. Contact Shelly Kerwin at 414-302-8412.

Project Narrative

Project: Living Hope Lutheran Church
1337 S 100th Street
West Allis, WI 53214

Living Hope Lutheran Church is requesting Level 2 Site, Landscaping & Architectural Design review and Board of Appeals review and approval for building renovations and site improvements to their existing property located at 1337 S 100th Street in the City of West Allis. The property is zoned RA-3 and an existing conditional use permit is in place.

Project scope includes a 17,344 sf interior remodel of the existing first floor of the building where they are currently using the existing gym space for worship. The interior remodel will transform the look of the interior of the existing gym to be more suitable, safer, and functional for worship and fellowship. Additionally, spaces where there are currently existing classrooms will be remodeled with the removal of walls to provide a large Narthex/ Lobby space for gathering. The existing toilet rooms will be remodeled to meet ADA accessibility requirements. Additional existing classrooms and storage space will be remodeled for a new kitchen to sever the proposed Hope Hall Room which is a remodeled space of three existing classrooms (along the south side of the building). The existing kitchen and toilet rooms will be removed and remodeled to create administration space and additional Narthex support space. As part of this project, there is a proposed approximate 1,200 sf canopy/ vestibule and steeple/ tower addition which will give the building a stronger presence along S. 100th Street and identify the building as a church instead of as a school which it once was.

The proposed addition will be located on the east side of the existing building and will encompass approximately 1,200 square feet. The project consists of the construction of a new enclosed vestibule and corridor that will provide a direct connection between the primary building entrance and the sanctuary entrance to the north. The vestibule and connecting walkway have been designed to improve ADA accessibility within the facility. This addition will allow for a safe and compliant route between the two entrances while maintaining a fully enclosed connection. The architectural design of the addition has been developed to complement the existing structure. Building materials and finishes, as illustrated in the submitted elevation drawings, will include stone and brick veneer selected to match the colors and character of the existing building. The addition will be visually cohesive and integrated with the current architecture. The total area of site disturbance associated with this project is approximately 0.03 acres. The proposed addition will enhance accessibility, safety, and usability of the building while maintaining consistency with the existing architectural aesthetic.

Relief is requested from municipal code section 19.42 Building Size and Location. The variance request meets the four (4) zoning variance requirements as noted below:

1. There are exceptional or unique conditions specific to the property that do not generally apply to other properties in the same zoning district.

- The property has a unique existing condition in that the building predates the current zoning code/ setback requirements. Additionally, the primary entrance and the sanctuary have different finish floor elevations, requiring an ADA compliant route for occupants to move between spaces. These combined factors create a constraint that is not typical of other properties in the zoning district. To provide a safe, ADA-compliant route, the addition must align with existing entrances. Because the building already encroaches into the required setback, there is no feasible way to construct this connection without further encroachment. The proposed 9.35-foot setback is therefore driven by the existing building placement and the need to create a safe and accessible connection, representing a condition unique to this property.

2. Without the variance, the property cannot be reasonably used in a manner consistent with the zoning code.
    - Without the variance, the property would be unable to provide an additional ADA-compliant accessible route between the main entrance and the sanctuary. The existing building's placement within the setback already limits available options for expansion. Strict compliance with the 20-foot setback would prevent proper alignment and grading of the walkway, making it impractical to construct a safe, accessible connection. As a result, members of the church that require ADA compliance would not have equitable access between key areas of the building, creating both safety concerns and noncompliance with accessibility standards. The variance is necessary to allow the property to function safely and reasonably for all users.

3. The variance will not be harmful to the public interest; nor will it negatively impact neighboring properties or undermine the intent of the zoning code.
    - The additional encroachment into the building setback is directly related to the new ADA ramp/ access corridor, thus making the building safer for the public. The addition is the minimum size necessary and is going over existing green space/ sidewalk and does not encroach on the public sidewalk therefore all public access remains the same and will not negatively impact the surrounding area. The proposed addition will match the existing structure and surrounding properties. The addition improves safe circulation within the building by providing a clearly defined, accessible route between entrances. It will not generate additional traffic, noise, or adverse impacts to neighboring properties. Because the variance supports improved safety and accessibility while maintaining consistency with the existing site conditions, it does not undermine the intent of the zoning code.

4. The hardship was not self-created by the property owner through actions such as subdividing, building, or altering the property.
    - The hardship is not self-created, as it originates from the existing placement of the building, which is already within the required 20-foot setback, and from the original layout that separates key building functions without an accessible connection. These conditions predate the current project. The property owner is seeking to address these limitations by improving safety and accessibility through the addition of an ADA-compliant connection. The need to encroach further into the setback is a direct result of working within the constraints of the existing structure, rather than any action taken by the current owner. The variance is

therefore necessary to correct an existing condition, not one that was self-imposed.

The proposed facility will operate as a church providing Bible Study and Sunday School classes. Hours of operation are Sunday from 7 AM – 1 PM, weeknights from 5 PM – 8 PM for Bible Study and various Bible Study classes, and Saturdays from 10 AM – 12 PM and 5 PM – 7 PM. Construction is anticipated to begin in November and is expected to be completed in early 2027. The estimated project cost is $4.5 million.

4. Site, Landscaping, and Architectural Design Review for Kwik Trip an existing Fuel Service Use at 10923 W LAPHAM ST. (Tax Key: 448-9979-014).

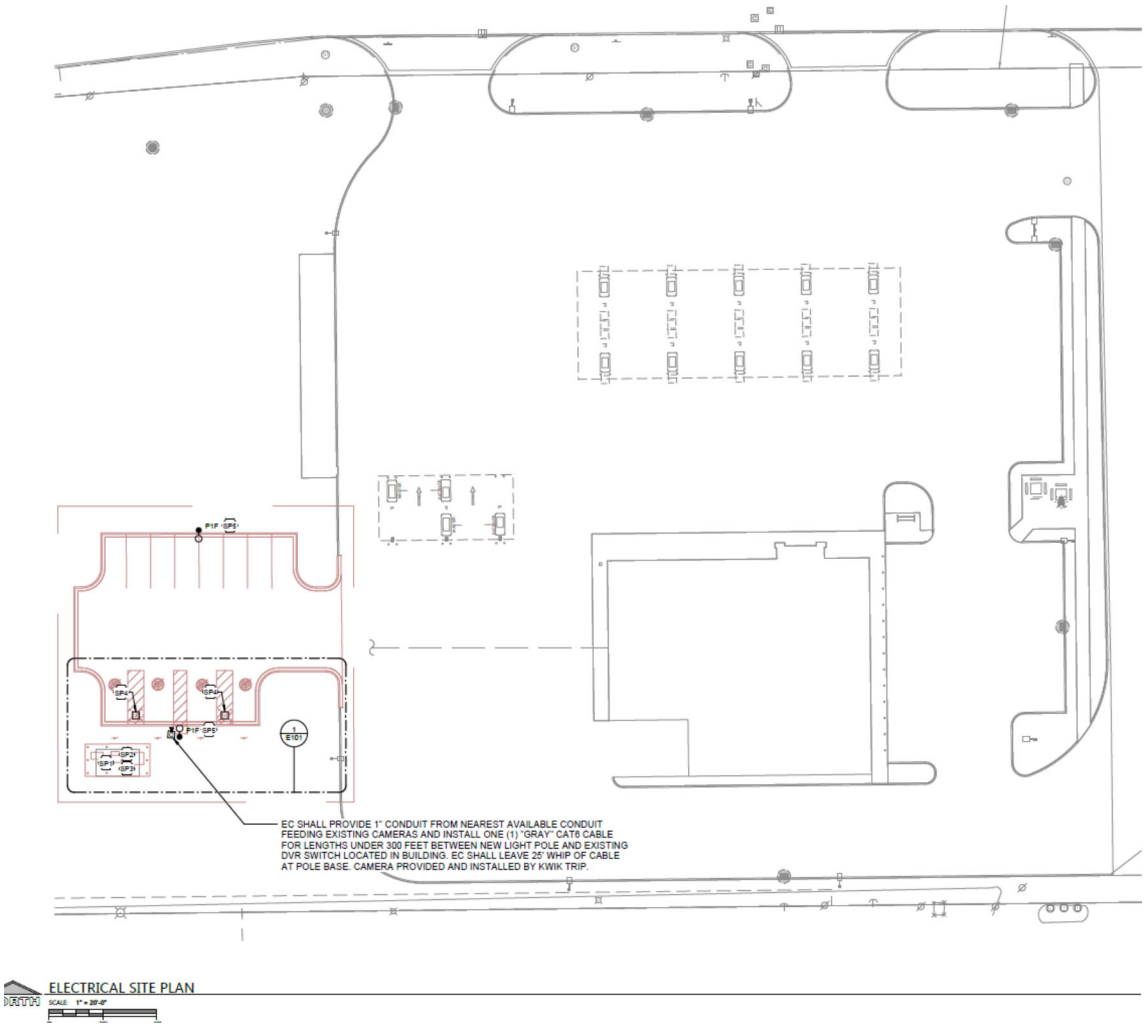
Overview and Zoning
Kwik Trip is proposing four electric vehicle charging stations on the west side of their property. This represents a site change to the plans approved in October of 2018, when Kwik Trips plans to demolish a old AMF Bowling Alley to develop their current site for a fuel station and store along with a car wash on the abutting property to the east fronting Hwy 100. Fuel stations are considered conditional uses and Kwik Trip was approved for their conditional use in 2018. The proposed EV charging stations represents a site modification and not a change in use, therefore the Plan Commission is tasked with reviewing the site, landscaping and design plans for the proposed updates.

The property is zoned C-3 commercial and the existing use will remain a convenience store and fuel gas station (now with some charging ports).

The project scope includes a 17,825 square feet proposed area of disturbance with an addition of 5,140 square feet of new impervious for the parking lot of 12 total parking stalls. Of these 12 parking stalls, 4 are designated for future EV charging stalls. This project will include 18" curb and gutter, curb cut and paint stripping with color to match parking stall striping.

The proposed project will have an estimated completion date of November 1, 2026. Hours of operation are remain unchanged per their 2018 conditional use at 24 hours a day, seven days a week.

EV Charging - Kwik Trip has rolled out rapid charging across several Midwest locations, with more sites actively under construction (for example West Allis/store #1047). Operational and developing sites include: Ashland, WI: 316 East Lake Shore Drive (Store #110), Chippewa Falls, WI: 2884 128th St (Chipa Crossing), La Crosse, WI: 3020 Market Place (Store #762), Menomonie, WI: 2411 Oak Avenue (Store #593), Mount Horeb, WI: 9255 Ridgeview Rd (Store #1130), West Salem, WI: 1100 US-16 (Store #1048)



ELECTRICAL SITE PLAN

Station Charging Speeds: Up to 150kW when four vehicles are charging, or up to 400kW for a single vehicle. Connectors: Supports both CCS1 and NACS (Tesla) plugs. Cost: Rates fluctuate but typically start between $0.45 and $0.59 per kilowatt-hour (kWh). Amenities: Access to fee-free ATMs, clean restrooms, WiFi, and 24/7 groceries/dining. For real-time charger availability and live pricing, use the dedicated Kwik Charge app or check platforms like PlugShare before you visit. A full fast charge will cost roughly $18.90 to $24.78.

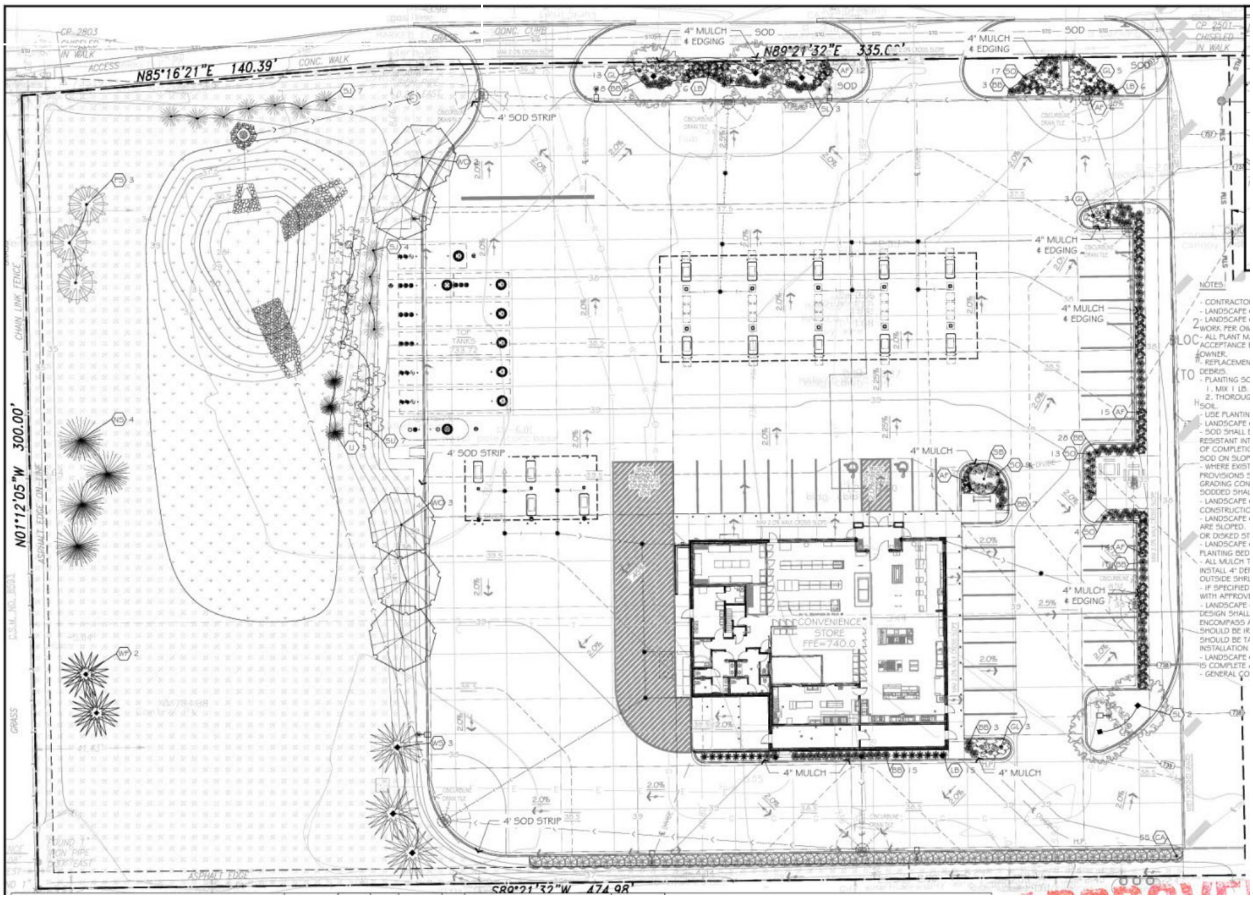
Site & Landscaping Plan

The plan submittal is included with this staff report. A basic site and civil engineering plan has been provided. Staff is recommending an update to the 2018 approved landscaping plan (below).

As part of the site alterations to add EV charging the new paved area will displace possibly up to four existing trees (white oak and white spruce) along the existing edge of pavement. Staff recommends a comparable replacement landscaping planting around the new charging area.

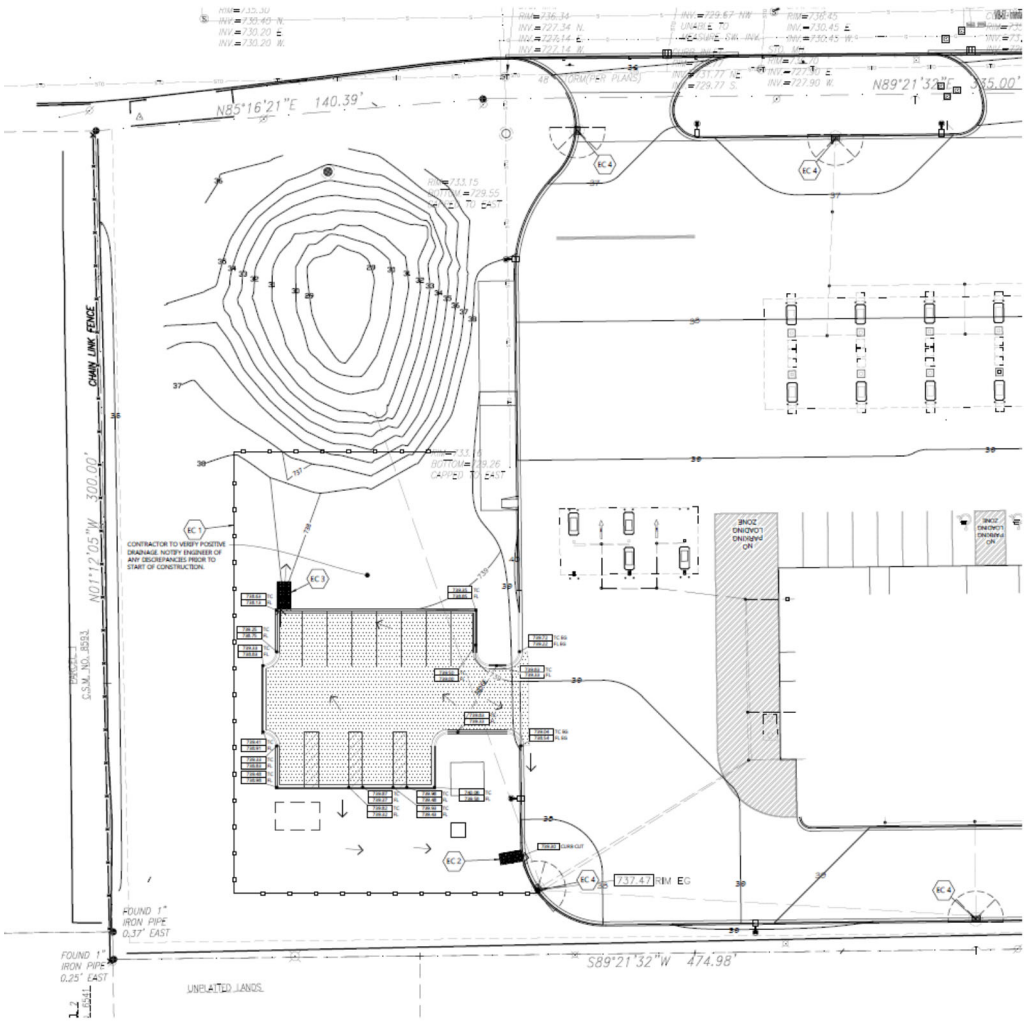
In addition, a stormwater management checklist is included as a condition of approval to determine if the added impervious area requires changes to the existing stormwater retention facility on site.

2018 Approved Landscape Plan



Lighting – two new 19-ft tall light poles are planned on each side of the charging area. A photometric plan has been provided.

Proposed EV Charging area



Recommendation: Site, Landscaping, and Architectural Design Review for Kwik Trip an existing Fuel Service Use at 10923 W LAPHAM ST. (Tax Key: 448-9979-014), subject to the following conditions:

1. Submit updated plans and details to the Planning & Zoning office to show (a) elevations of charging stations will need to show the height of all the controls and also bollard spacing for accessibility guidelines on the plans at time of building permit review; (b) As part of the site alterations to add EV charging the new paved area will displace three existing white oak trees and one white spruce tree along the existing edge of pavement. Staff recommends a comparable replacement landscaping planting around the new charging area.
2. Stormwater checklist - Documentation and approval showing compliance with the City of West Allis Storm water Management Ordinance, to be submitted to the Building Inspections and Neighborhood Services Department by a registered Civil Engineer.

3. Any update to the signage plans will require staff review for compliance and subject to permitting.

METALLIC STRUCTURES MUST BE PROPERLY GROUNDED. ANY METALLIC STRUCTURE, POLE, WIRE, OR ITEM PLACED IN THE VICINITY OF A HIGH-VOLTAGE TRANSMISSION LINE WILL HAVE THE POTENTIAL TO BECOME ELECTRICALLY CHARGED DUE TO ELECTRIC INDUCTION. THE DEVELOPMENT OF AN ELECTRIC CHARGE RESULTS IN POTENTIAL DIFFERENCE BETWEEN THE METAL INSTALLATION AND THE GROUND, WHICH CAN RESULT IN ELECTRICAL SHOCKS WHEN THE ITEM IS TOUCHED. PLACEMENT OF SUCH METALLIC INSTALLATION SHOULD TAKE INTO CONSIDERATION THE SHOCK POTENTIAL DURING THE CONSTRUCTION, INTENDED USE, AND FUTURE MAINTENANCE ACTIVITIES. ITEMS WHICH BECOME CHARGED MUST BE CONNECTED TO A GROUND ROD OR GROUNDING SYSTEM TO PREVENT ELECTRICAL SHOCKS.

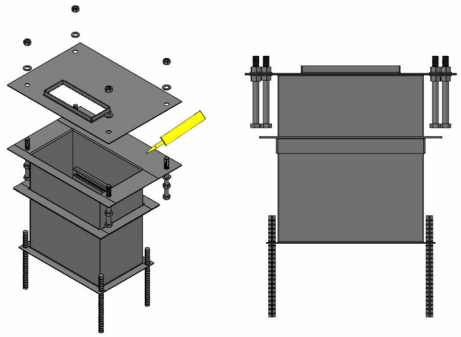
1. Using the provided urethane sealant run a bead around the perimeter of the upper flange before installing the upper frame.
2. Install the upper frame using the provided mounting hardware. Be sure the proper length of threads are exposed above the frame to properly mount the charger with most of the bolt protruding downwards for proper concrete embedment.
3. Nuts should be tightened (one above the frame flange and one below) to secure the upper frame and the mounting bolt position.



STEP 5 – POUR CONCRETE

1. After the concrete pour has cured remove the upper nut to expose the protruding threads used to mount the charger.

B. PROVIDE ALL LABOR, MATERIALS AND EQUIPMENT FOR ALL EXCAVATION, GRADING, FILL AND BACKFILL WORK AS REQUIRED TO COMPLETE THE GENERAL CONSTRUCTION WORK. ALL EXCAVATION AND BACKFILL FOR ELECTRICALS AND MECHANICALS ARE THE RESPONSIBILITY OF THE RESPECTIVE CONTRACTOR UNLESS OTHERWISE SPECIFIED IN THE BID DOCUMENTS.
C. ALL ORGANIC TOPSOIL UNDER PAVED AREAS AND AT SITE FILL AREAS SHALL BE REMOVED. PROOF ROLL SUBGRADES BEFORE PLACING FILL WITH HEAVY PNEUMATIC-TIRED EQUIPMENT, SUCH AS A FULLY-LOADED TANDEM AXLE DUMP TRUCK, TO IDENTIFY SOFT POCKETS AND AREAS OF EXCESS YIELDING. CONTRACTOR SHALL VERIFY TOPSOIL DEPTHS PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL REVIEW AND FOLLOW THE RECOMMENDATIONS OF THE GEOTECHNICAL REPORT AND ACCOUNT FOR EXISTING CONDITIONS PRIOR TO SUBMITTING BID FOR THE PROJECT. EXCESS MATERIALS SHALL BE REMOVED FROM THE SITE UNLESS OTHERWISE DIRECTED IN THE PLANS OR BY LOCAL ZONING REQUIREMENTS.
D. PLACE AND COMPACT FILL MATERIAL IN LAYERS TO REQUIRED ELEVATIONS. UNIFORMLY MOISTEN OR AERATE SUBGRADE AND EACH SUBSEQUENT FILL OR BACKFILL LAYER BEFORE COMPACTION AS RECOMMENDED TO ACHIEVE SPECIFIED DRY DENSITY. REMOVE AND REPLACE, OR SCARIFY AND AIR DRY, OTHERWISE SATISFACTORY SOIL MATERIAL THAT IS TOO WET TO COMPACT TO SPECIFIED DRY DENSITY.
E. PLACE BACKFILL AND FILL MATERIALS IN LAYERS NOT MORE THAN 8" IN LOOSE DEPTH FOR MATERIAL COMPACTED BY HEAVY COMPACTION EQUIPMENT, AND NOT MORE THAN 4" IN LOOSE DEPTH FOR MATERIAL COMPACTED BY HAND-OPERATED TAMPERS.
F. COMPACT THE SOIL TO NOT LESS THAN THE FOLLOWING PERCENTAGES OF MAXIMUM DRY DENSITY ACCORDING TO ASTM D 698, STANDARD PROCTOR TEST. FILL MAY NOT BE PLACED ON FROZEN GROUND AND NO FROZEN MATERIALS MAY BE USED FOR BACK FILL. APPLY THE MORE STRINGENT REQUIREMENTS WHEN COMPARING BETWEEN THE FOLLOWING AND THE GEOTECHNICAL REPORT.
   1. UNDER EXTERIOR CONCRETE AND ASPHALT PAVEMENTS - COMPACT THE SUBGRADE AND EACH LAYER OF BACKFILL OR FILL MATERIAL TO NOT LESS THAN 95 PERCENT.
   2. UNDER WALKWAYS - COMPACT SUBGRADE AND EACH LAYER OF BACKFILL OR FILL MATERIAL TO NOT LESS THAN 95 PERCENT.
   3. UNDER LAWN OR UNPAVED AREAS - COMPACT SUBGRADE AND EACH LAYER OF BACKFILL OR FILL MATERIAL, TO NOT LESS THAN 85 PERCENT.
G. CONTRACTOR SHALL ENGAGE A QUALIFIED INDEPENDENT TESTING AND INSPECTING AGENCY TO PERFORM FIELD TESTS AND INSPECTIONS. CONTRACTOR SHALL PROVIDE DOCUMENTATION OF PASSING DENSITY TESTING AND PROOF-ROLLING TO ENGINEER UPON COMPLETION. IT IS SUGGESTED THAT THE GEOTECHNICAL FIRM USED TO PERFORM THE SUBSURFACE SOIL INVESTIGATION BE ENGAGED FOR THE FIELD QUALITY CONTROL TESTS.
H. ALLOW THE TESTING AGENCY TO TEST AND INSPECT SUBGRADES AND EACH FILL OR BACKFILL LAYER. PROCEED WITH SUBSEQUENT EARTHWORK ONLY AFTER TEST RESULTS FOR PREVIOUSLY COMPLETED WORK COMPLY WITH REQUIREMENTS. PROVIDE ONE TEST FOR EVERY 2000 SQUARE FEET OF PAVED AREA OR BUILDING SLAB.
I. WHEN THE TESTING AGENCY REPORTS THAT SUBGRADES, FILLS, OR BACKFILLS HAVE NOT ACHIEVED DEGREE OF COMPACTION SPECIFIED, SCARIFY AND MOISTEN OR AERATE, OR REMOVE AND REPLACE SOIL TO DEPTH REQUIRED; RECOMPACT AND RETEST UNTIL SPECIFIED COMPACTION IS OBTAINED.
J. THE BUILDING SITE SHALL BE GRADED TO PROVIDE DRAINAGE AWAY FROM THE BUILDING AS INDICATED ON THE PLANS. SITE EARTHWORK SHALL BE GRADED TO WITHIN 0.10' OF REQUIRED EARTHWORK ELEVATIONS ASSUMING POSITIVE DRAINAGE IS MAINTAINED IN ACCORDANCE WITH THE GRADING PLAN.

31 30 00 EROSION CONTROL

A. THE GRADING PLAN REFLECTS LESS THAN 1 ACRE OF DISTURBED AREA. THE SITE IS THEREFORE EXEMPT FROM WISCONSIN DEPARTMENT OF NATURAL RESOURCES NR 216 NOTICE OF INTENT REQUIREMENTS. THE DESIGN ENGINEER SHALL PREPARE AN EROSION CONTROL PLAN TO MEET NR 151.105 CONSTRUCTION SITE PERFORMANCE STANDARDS FOR NON-PERMITTED SITES.
B. EROSION AND SEDIMENT CONTROL IMPLEMENTED DURING CONSTRUCTION SHALL STRICTLY COMPLY WITH THE GUIDELINES AND REQUIREMENTS SET FORTH IN WISCONSIN ADMINISTRATIVE CODE (W.A.C.) NR 151, THE STATE OF WISCONSIN DEPARTMENT OF NATURAL RESOURCES RUNOFF MANAGEMENT PERFORMANCE STANDARDS. TECHNICAL STANDARDS PUBLISHED BY THE WISCONSIN DNR SHALL ALSO BE UTILIZED TO IMPLEMENT THE REQUIRED PERFORMANCE STANDARDS. THE METHODS AND TYPES OF EROSION CONTROL WILL BE DEPENDENT ON THE LOCATION AND TYPE OF WORK INVOLVED. ALL SEDIMENT CONTROL MEASURES SHALL BE ADJUSTED TO MEET FIELD CONDITIONS AT THE TIME OF CONSTRUCTION, AND INSTALLED PRIOR TO ANY GRADING OR DISTURBANCE OF EXISTING SURFACE MATERIAL. BELOW IS A LIST OF EROSION AND SEDIMENT CONTROL BEST MANAGEMENT PRACTICES TO ACHIEVE THE PERFORMANCE STANDARDS REQUIRED.
